

The goal of this assignment was to sketch a picture of what we want our website to look like. I decided to put a border around the text “Hello World,” and to insert a picture of our world, the Earth. I

also put in a background that flows into the picture rather well. I knew how to do most of the stuff inside this project; however, I had to look up how to insert the image. I was eventually able to incorporate working code to add in the picture. I used the code:

```

```

This code adds in the picture from file, and if it fails to load the picture, it says Failed to load

```
.outerspace.jpg
{
  image-resolution: from-image;
  align-content: center;
}
```

where the image would be. The code also sets how large

the picture is on the webpage. Then in the CSS I set the

image to be centered on the page. The next step I took

was to add the border around “Hello World.” To do this I

turned “Hello World” into a span and set the id as HW. Then

I went into the CSS and made the border style dotted to give

```
#HW
{
  border-style: dotted;
  border-color: azure;
}
```

it a dotted border, and I made the color of the border azure. I did not like that I had to draw a sketch of the website due to my inartistic ability, but I did like coding the project because there was experimentation, so as I was programming the website I would learn new things.
