Jordan Heitkamp

I liked this project because I think it is a good introduction to the website design. I had fun working on this project and it encouraged me to start looking at more stuff that you hadn't

told us about yet. I also found the project to be very easy, which is good since it's an introduction.

There was minimal actual coding for the design. For the design of the page I used two lines of code.

I set the background color to black with the code: background-color: black; and I used the code:

```
index.php × Nucss × Nucse × Nucse × Nucse × Nucse 
color: white: to set the
                                                                                                            Source History № 👺 - 👼 - 🔍 🗫 ኞ 🖶 📮 🔗 😓 😉 🖭 🎱 💣 🚅 📵 💵 <
                                                                                                                                   <!DOCTYPE html>
                                                                                                                2
text color to white.
                                                                                                                3
                                                                                                                                 To change this license header, choose License Headers in Project Properties.

                                                                                                                                                                     <meta charset="UTF-8">
                                                                                                             11
                                                                                                                                                                     <title>Net-Centric Computing</title>
                                                                                                             12
                                                                                                                                                     </head>
prewritten code, and
                                                                                                             13
                                                                                                                                                     <body>
                                                                                                             14
                                                                                                                                                                 Hello World!
added just two lines,
                                                                                                             15
                                                                                                                                                     </body>
                                                                                                             16
                                                                                                                                   </html>
                                                                                                             17
and made one change
```

in the generated code. I wrote "Net-Centric Computing" between the <title> and </title> tags.

Then I got the code from the internet to add a CSS and put that inside the head. The final line I

added in the PHP file was the text "Hello World!" so "Hello World!" would be written on the

```
/*
